

Airtight silicone lids

en Product information

Dear Customer

Your new silicone lids keep your food airtight and thus fresh for longer. Simply pull the most appropriately sized lid over the cut edge of fruit or vegetables, such as lemons, onions or cucumbers, or over yoghurt pots, small bowls, jars or tins filled with chopped vegetables, sauces or other leftover food.

The lids are ...

... suitable for use at temperatures from -18 °C to +40 °C. They are **not** suitable for baking, cooking or for use in the microwave.

... suitable for use in the freezer.

... dishwasher-safe. However, do not place them directly above the heating elements.

Do not use pointed or sharp objects when handling the silicone lids. Such objects will damage the lids.

- ▷ Clean the lids prior to first use and after every other use with hot water and a little washing-up liquid. Do not use any caustic products or scouring sponges for cleaning.
- Strongly coloured foods (e.g. carrots) may discolour the lids. This is neither harmful to your health nor does it impair the quality or function of the lids.
