

en Product information

Dear Customer

Keep the following information in mind to ensure the hooks have a firm hold on the wall:

The adhesive tape adheres to all smooth and level surfaces such as mirrors, glass, tiles, etc. Do not stick the hooks over joints or other irregularities. The adhesive tape will not adhere to textured or painted surfaces or to oiled wooden surfaces.

The adhesive tape is intended for permanent fixture. Avoid fastening the hooks to sensitive surfaces if you want to detach them at a later point in time.

The surface must be free of dust, grease, silicone and limescale. Clean and degrease the surface with **pure alcohol (isopropanol) or methylated spirits**. Bathroom or all-purpose cleaning agents are not suitable. Slightly pre-dry the cleaned spot, then let it dry thoroughly. Position the hook and press it on firmly for approx. 10 seconds. After approx. 30 minutes press on it once more for approx. 10 seconds. After a further 24 hours the hook is ready for use.

The best adhesive strength can be attained at temperatures between 23°C and 40°C.

Load-bearing capacity per hook: max. 1.5 kg
