

en Instructions for use

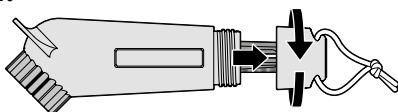

Cleaning the drain opening

Use the scraper **carefully** and **do not apply too much pressure** to avoid scratching delicate surfaces and causing damage.

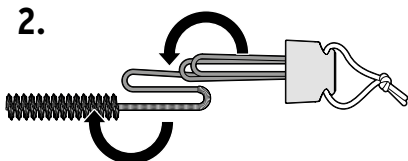

Cleaning the drainpipe

1.

Unscrew the cap from the handle end and pull out the pipe cleaning brush.

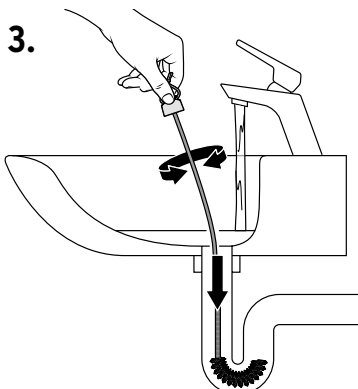

2.

Straighten the brush as much as possible.

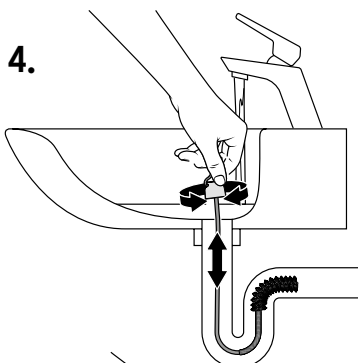

Tip: Open the tap and run warm water while you push the pipe cleaning brush into the drainpipe. When the water is running, it is also easier to pull the brush out of the drainpipe again if it gets stuck.

3.

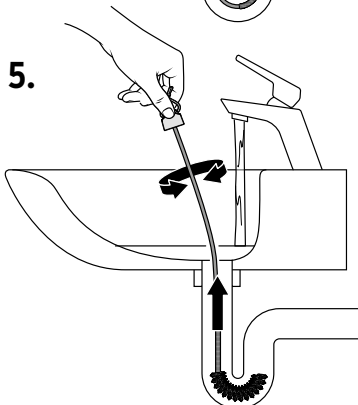

Slowly push the pipe cleaning brush into the drainpipe. In doing so, twist it back and forth, ...

4.

... move the brush up and down while twisting it.

5.

Then slowly pull the brush out of the drainpipe again, while still twisting it.

6.

Then clean the pipe cleaning brush under warm running water. Allow the brush to dry thoroughly before folding it up again and storing it in the handle.
