

en Product information

Please follow the care instructions mentioned below:

- Never leave the knife with traces of food on it for any length of time. Always wash it immediately after use. If you cannot do this, give it a quick rinse with warm water.
- Only use a mild washing-up liquid for cleaning, and then polish the knife with a soft cloth. This prevents natural stains from limescale.
- The knife can also be cleaned in a dishwasher. However, remove it as soon as the dishwashing cycle is complete and dry it thoroughly if necessary.
- Minute rust particles from pots and pans or defective dishwasher racks often accumulate on metal parts and manifest themselves as rust stains. Remove these stains with a metal care product to prevent them from spreading.
